How to Make Money with OpenAI Dots + GPT-6.1 Sol + Higgsfield

A step-by-step guide to running an AI-avatar Instagram account on autopilot: one master prompt, one avatar, three income streams.

Rewritten for our group. Includes a reality check at the end.

1. What is Dots?

Most people assume Dots is another chatbot upgrade. It is not. Dots is an autonomous agent that has its own cloud computer, its own browser, and access to 4,000+ apps. You give it instructions once and it works on a schedule (researching, creating, posting, analyzing) without you opening your laptop. It is powered by GPT-6.1 Sol, OpenAI's most capable model to date.

The key idea: you are not writing a prompt, you are setting up an agent. Things Dots can run for you:

- Run a niche newsletter every day
- Research leads and prepare personalized outreach
- Monitor competitors and surface opportunities
- Operate a content engine across X, LinkedIn, Instagram and YouTube
- Research new products and markets continuously
- Analyze customer feedback and generate product insights
- Watch your SaaS metrics and flag problems
- Find sponsorship opportunities and prepare pitches
- Run weekly SEO / content research
- Act as an always-on research analyst for your business

2. The business in 60 seconds

You build an Instagram account in a hyper-specific pain niche. Not with your face, your voice or your time: an AI avatar posts for you every day. The avatar grows the audience, the audience buys what you sell.

The math (as presented):

- AI avatar posts 1 video per day in your niche
- Each video targets people with a specific, painful problem
- They follow because the content hits exactly where it hurts
- You have a $37 ebook in your bio that solves that exact problem
- 10,000 followers x 0.3% buying = 30 sales per month
- 30 x $37 = **$1,110 per month** from one ebook

Add coaching, affiliate offers and a second account to reach the $10K/month target. Three income streams, one AI avatar, zero filming.

3. Pick a pain-killer niche

Not "health content". Not "finance tips". The more specific the pain, the faster the audience grows.

Formula: [audience with a specific identity] + [urgent problem they are embarrassed about] = viral niche

Examples given in the article

- **Hormonal weight gain for women 35-50**: huge search volume and a strong shame factor
- **Sexual energy and testosterone for men 30+**: taboo but constantly searched; $97 ebooks sell on day one
- **Postpartum body recovery for women over 40**: emotional, underserved, loyal audience
- **Memory and brain fog for people 50+**: fear-based, supplement-affiliate heavy
- **Belly fat that won't move after 45**: the most-searched weight-loss sub-niche

The worked example used throughout: "Testosterone and sexual energy for men 30-45"

Factor	Rating
Pain level	10/10
Embarrassment	High (people search privately, not publicly)
Willingness to pay	Extremely high
Competition from humans	Medium
Competition from AI avatars	Almost zero

Step 1: One prompt to Dots

This is the whole system in one message. You write it once and Dots does the rest every day. Replace the bracketed placeholders with your own details.

```
You are my Instagram content manager for a health account targeting men aged 30-45 who want
  to restore their testosterone, sexual energy, and vitality naturally.

My niche: "Natural testosterone and sexual energy for men 30-45"
My Instagram handle: [YOUR HANDLE]
Post time: 6:00 PM PT every day

Every day at 6:00 PM PT, do the following in order:

STEP 1 - RESEARCH (5 mins)
Search Instagram Reels, TikTok, and YouTube Shorts for the top-performing videos in the last
  7 days on these topics:
- testosterone after 30
- low energy in men
- morning routines for men
- foods that kill testosterone
- sleep and testosterone
- sexual health men natural
Find the 3 best-performing videos. For each one, note:
- The hook (first 3 seconds)
- The structure
- The emotion it triggers
- Approximate view count and engagement

STEP 2 - SCRIPT (10 mins)
Rewrite the best-performing video as an original script for my account. Do not copy. Rewrite
  with:
- A new hook that stops the scroll in 2 seconds
- My voice: direct, masculine, science-backed, no fluff
- Length: 45-60 seconds
- End with: "Follow for one tip daily that your doctor won't tell you"
- Include 3-5 word-for-word captions to overlay on screen

STEP 3 - GENERATE VIDEO (via Higgsfield connector)
Use the Higgsfield connector to:
- Generate a video using my saved avatar [AVATAR ID]
- Apply the script as voiceover
- Add the caption overlays at the timestamps in the script
```

```
- Apply the style preset: "confident male health creator, clean background, natural
  lighting"
- Export as 9:16 vertical video, 1080p

STEP 4 - POST TO INSTAGRAM
Post the video to my Instagram at exactly 6:00 PM PT with:
- Caption: [first line of the hook] + 3 relevant hashtags + CTA
- Hashtags: #TestosteroneHealth #MensHealth #NaturalHealth plus 2 trending hashtags you find
  during Step 1 research

STEP 5 - ANALYZE (next morning at 8:00 AM PT)
Check the video's performance stats at 8:00 AM PT the following morning. Note:
- Views in first 12 hours
- Comments and saves (most important signals)
- Which hook type performed (question / bold claim / story)
Send me a one-paragraph summary via ChatGPT with your recommendation for what to replicate
  tomorrow.

RULES:
- Never repost the same hook structure twice in a row
- Always test a new hook format every 3 days
- If a video gets 3x normal engagement, note it as a "winning format" and use that structure
  again within 7 days
- If 3 consecutive videos underperform, message me to review the content direction before
  continuing
- Always stay compliant with Instagram community guidelines
- Never make medical claims. Frame everything as lifestyle tips.

Run this every day without being asked. Report to me if you need a decision. Otherwise,
  proceed autonomously.
```

Dots runs it every day at 6 PM, analyzes results at 8 AM, and tells you what is working.

Step 2: Your Higgsfield AI avatar

Higgsfield connects to Dots as a plugin. It is a one-time setup; after that Dots uses it automatically every day. In this system Higgsfield:

- Hosts your AI avatar (generated once, used forever)
- Receives the script from Dots
- Generates the video with your avatar speaking the script
- Applies caption overlays at the right timestamps
- Exports in the correct format for Instagram

Dots handles the Higgsfield connector call inside its daily workflow, so you never touch it after setup.

Avatar setup notes (testosterone niche)

- Male avatar, 32-42 years old in appearance
- Clean background (white, dark navy, or an outdoor natural setting)
- Confident posture, direct eye contact
- Casual but clean clothing (not a lab coat, not a gym selfie)
- Save the avatar ID into your Dots prompt

The avatar is your face. It posts every day. You never film anything.

Step 3: The monetization layer

The avatar builds the audience; you monetize it separately. This takes roughly 2-4 hours of work, once, upfront. Pick one option to start.

Option A: Ebook ($27-67)

Example title: "7 Foods That Destroy Testosterone After 30 (And What to Eat Instead)". Write it with an AI assistant, format it in Canva, and sell it on a storefront such as Gumroad or Whop. Put the link in your bio and post an Instagram story every 3 days. At 10,000 followers the article estimates 30-50 sales a month at $37, or $1,100-1,850 per month.

Option B: Private coaching ($297-497/month)

Works well because the problem is personal and people will pay to fix it privately. Target 5 DMs a week from interested followers and close 2-3 clients a month: 3 clients at $297 = $891/month. It can be run from a phone in about 30 minutes a day. If you are not comfortable coaching yourself, you can hire experts from a freelance marketplace and refer clients to them for a cut.

Option C: Supplement affiliate ($30-80 per sale)

Pick one reputable supplement brand that runs an affiliate program and post one "what I use" video per week. At 50,000 followers the article estimates 20-40 sales a month at about $40 = $800-1,600/month, with no fulfillment or customer service. *(Note: any affiliate links have been left out of this guide. Add your own through the brand's program. See the reality check on disclosure.)*

Timeline to $10K/month (author's projection)

Period	Followers	What happens	Revenue
Months 1-2	0-5,000	Ebook launches, first sales trickle in	$200-800
Months 3-4	5,000-20,000	Ebook + first coaching clients	$1,500-3,500
Months 5-6	20,000-50,000	Coaching fully booked, ebook passive, affiliate income begins	$4,000-8,000
Month 7+	50,000+	All three income streams	$10,000-18,000/month

The full system at a glance

YOU (once, upfront)	DOTS (every day, forever)	YOU (ongoing)
Pick a hyper-specific pain niche Create the Higgsfield avatar Write the master Dots prompt Build the ebook / set up coaching / join an affiliate program Put the link in your bio	6 PM PT: research top content 6 PM PT: write an original script 6 PM PT: generate the avatar video 6 PM PT: post with caption + hashtags 8 AM PT: analyze stats and report Ongoing: learn what works	Review the morning report (5 min) Approve any decisions Dots flags Fulfil coaching calls (30 min/day if you coach) Deposit revenue

You are not a content creator, you are a system operator. The avatar is the face, Dots is the team, GPT-6.1 Sol is the brain, and you are the owner.

Who this is for

- People who want recurring income without being on camera
- Creators tired of the daily content grind
- Entrepreneurs looking for a second income stream
- Anyone who has tried to build an Instagram account and burned out

Who it is not for

- People who want results with no setup
- Anyone unwilling to spend 2-4 hours building the ebook/offer
- People in niches with no clear monetization path

What you need to start

Item	Notes
ChatGPT Pro or Business Premium plan	Needed for Dots access
Higgsfield account	Connect via Dots plugins/connectors
Instagram account in your niche	New or existing
One hyper-specific pain niche	Use the formula in section 3
One offer	Ebook, coaching page, or affiliate offer

The setup takes about one weekend. After that the system runs on its own.

Reality check: read before you start

- **The math has an error.** "10,000 followers x 0.3% daily conversion = 30 sales/month" does not add up: 0.3% of 10,000 per day is 30 sales *per day*. The 30/month figure only works if 0.3% of followers buy *per month*, and even that is an optimistic assumption, not a measured result.
- **Dots is new and unproven.** Commenters report glitches. It is not guaranteed to run 24/7, and sensitive actions may need your permission, so expect to manage it. Posting directly to Instagram via a connector should be tested first.
- **The income figures are projections** from the author, not verified earnings. Several commenters questioned whether the post is engagement-farming.
- **Disclose AI.** Instagram and the FTC expect clear disclosure of AI-generated content, and of affiliate relationships and paid endorsements. Some platforms let viewers report "AI slop"; low-effort accounts risk reach loss or removal.
- **Health niches are sensitive.** The sample prompt says "never make medical claims" but also ends videos with "your doctor won't tell you". Supplement, testosterone and sexual-health content is heavily policed and can mislead people. Keep claims accurate, cite real sources, and consider changing that CTA.
- **Costs.** Budget for the ChatGPT plan, Higgsfield credits (30 avatar videos a month is not free) and your time. Several readers asked about ongoing token/credit cost; it was not answered in the post.
